Highlights

Clear user interface

The clear user interface makes it fast and easy to find what you're looking for. It guides you through the dictation and upload process quickly and intuitively.

Easy-to-use touch screen control

The display shows all recording functions, and the main interface allows the user to record and navigate within recordings. Additionally, users can prioritize a recording, define a keyword and/or a category, or simply edit the recording name. The clear user interface makes it fast and easy to find what you're looking for. It guides you through the dictation and upload process quickly and intuitively.

Automatic encryption

To avoid people accidentally getting access to your audio files, the highly secure Philips Recorder for BlackBerry offers not only the capability to encrypt files, but the file transfer is also encrypted via SSL technology.

Professional recording control

The Philips Recorder for BlackBerry takes full advantage of the touch interface. It offers editing functions such as insert, overwrite, and append for professional recording control.

Priority setting

With the included priority-setting option, urgent recordings can be prioritized. This guarantees that important dictation files will be identified at a glance and get processed and delivered first.

SpeechExec mobile server

The Philips Mobile Server application distributes the recorded files automatically to its registered users via e-mail or directly to a network folder, making your dictation workflow more convenient than ever before.

Location-independent

The Philips Recorder for BlackBerry turns your smartphone into a wireless digital dictation recorder. Record dictation files at home, in the office, on a plane, or anywhere you need to record and send voice files. The ability to send dictation files through wireless transfer decreases turnaround time and dramatically increases personal productivity.
