The **Start Stop Hands-Free Dictation System II** ("SSHFDS-2") is a professional, PC based, voice recording interface designed in conjunction with pathologists and radiologists. This is a 2nd-generation system, based on our previous experience over the last 4 years.
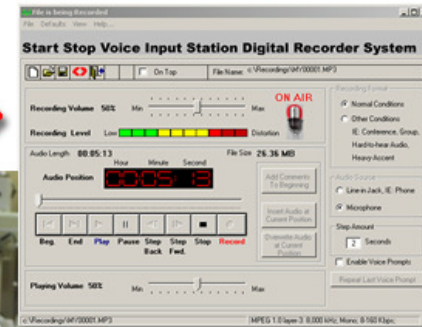

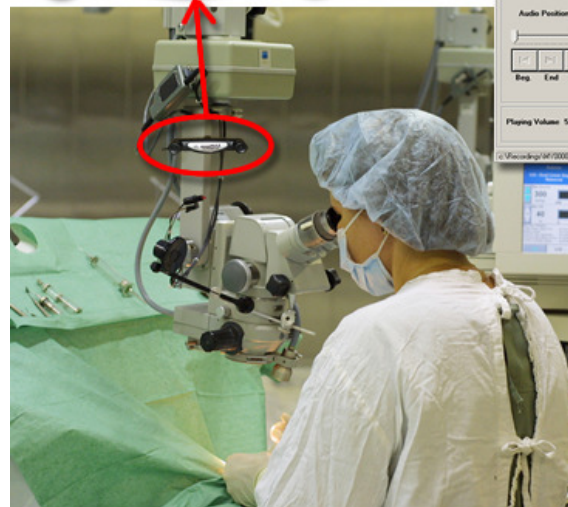

Features Include:

-Near-instant transmission of your dictation upon completion, via email, FTP, or LAN (or all 3 at once)

-Crystal-clear capture while working 2 feet away from the highly directional array pickup microphone

-Automatic File/Demographics numbering when each new dictation is created

-Review/Playback of dictation just created using the foot pedal, with Insert and Append features

-Built in 128-Bit HIPAA Security encryption, when sending dictations off-site via email or FTP

-Advanced communication features for interface to existing Path/RIS systems for TCP/IP and automatic dictation file naming

-Supports Industry-Standard WAV, MP3, Truespeech WAV, VOX, WMA formats

-Fully supported product via web, telephone, and Microsoft Netmeeting™

-Satisfaction Guaranteed

Andrea SuperBeam Microphone picks voice up clearly up to 24 inches away.

Start Stop Hands-Free Digital Recording Software automatically sends each dictation to the transcriptionist via your office network, or off-site via HIPAA-compliant email or FTP

Dictations are sent quickly (near real-time) to transcriptionist
