

Projects are automatically saved throughout the session, but can be explicitly saved here

Projects are created or opened to begin session

Start and Stop of court and mask audio is done through these

MultiPlayback will begin playing the court audio in the court speakers from the tag of the current cursor position. It will continue to playback subsequent tags until stopped or it reaches the end of the tags.

A visual cue for the court reporter, the Tag Audio button designates whether a tag is in progress or completed. This button can be pressed to begin or end a tag. A red box indicates a tag in progress a green box says the last tag was completed

Court Playback and Preview Playback will both playback the audio recording of the court. The playback will be limited to the audio tag active at the current cursor position. The difference in the two is that the Preview Playback will play audio in the court reporters headset, while court playback will play the audio in the external speakers for the court to hear

The status bar contains the status of two advanced features of HTH GoldenEar. The Macro Mode (Alt+M) allows for quick tag creation and document traversing. The Pedal Active indicates whether a foot pedal is active for the session
