the purchase of our new RecMic II! Contact Us for Details.**

CAPTURE YOUR VOICE WITHOUT UNWANTED NOISE

Create clean, accurate verbal notes efficiently with the Olympus RecMic II. This series of desktop dictation microphones combines advanced technologies in an innovative noise canceling system ideal for noisy environments.

Intelligent dual microphones control the directionality to keep the focus on the person dictating, and suppress non-voice noise eliminating anything outside the human frequency range. In addition, a triple-layer studio-quality filter blocks traditionally problematic sounds including wind breath noise.

The RecMic II microphones retain accurate spoken audio without any distortion while suppressing unwanted noise, making desktop dictation easy.

RM-4110S Slide Switch Microphone**

RecMic II: RM-4010P & RM-4110S

Best-in-class noise canceling capabilities cover any environment with superior accuracy

Accurate & Clear Speech Recognition in a Noisy Environment

Dual microphone technology creates narrow directionality that focuses on the acoustics in front of the microphone and suppresses unwanted noise from the sides and back.

Professional Studio-Quality Filtering

The triple-layer pop filter uses the same technology found in professional studio recording microphones to block unwanted but difficult-to-eliminate sounds such as breath and wind vibrations.

Antimicrobial Body

The housing and buttons on every RecMic II are made of antimicrobial coating materials (ISO 22196). The "tolerance to alcohol" design allows for superior cleanability.

Intuitive Configuration

The RecMic II is easily configurable with third party applications including web applications without having Olympus software running, and can be used as a USB Keyboard for easy control simply by changing modes.
