Enterprise-Class Workflow Solution

ODMS ADMINISTRATOR TOOL (AS-56)

The ODMS Administrator Tool (A.K.A AS-56) is designed for medium & large organizations and contains all of the tools required to install, customize, and manage an ODMS environment in Workgroup mode without any ongoing costs.

AS-56 includes both the System Configuration Program (SCP) and License Manager (LM) that offer the administrator a vast array of features, to allow them to centrally manage and configure their ODMS environment. User and group profiles can be managed in large numbers allowing for faster, easier configuration. ODMS workflow and device settings can be locked so that organizations can implement a standard workflow for their dictation environment, ensuring total consistency and accuracy. License Manager tracks the use of the Dictation and Transcription Module across the workgroup system. It also allows the IT Administrator to update the license simply by entering a new key, which is quick and easy to add more users to an ODMS environment without affecting the entire system.

Olympus Dictation Management System
Release 6.0.0
for Administrators

R3577-10

Features

▶ **ODMS workflow and device settings can be centrally configured and locked**

▶ **Custom installer files can be created to streamline the deployment process**

▶ **Software and firmware updates can be deployed to specific groups or users**

▶ **Licenses are centrally managed and quick and easy to be added**

▶ **Repository service restricts access to the repository for security enhancement**

▶ **Citrix, Windows Terminal Services, and VMware are supported**

Use case:

Streamlining cumbersome user management in medium & large organizations

The ODMS Administrator tool **allows IT administrators to centrally manage licenses and workflow/device configurations,** drastically saving administrator's time as well as end-users' time. Almost no client-side configuration required, and the software is ready from when the user first launches it.

ODMS Software **Specifications**

	Comparison between Standalone and Workgroup	
	STANDALONE	WORKGROUP (*)
