### **OLYMPUS AS-56 Administration Kit**

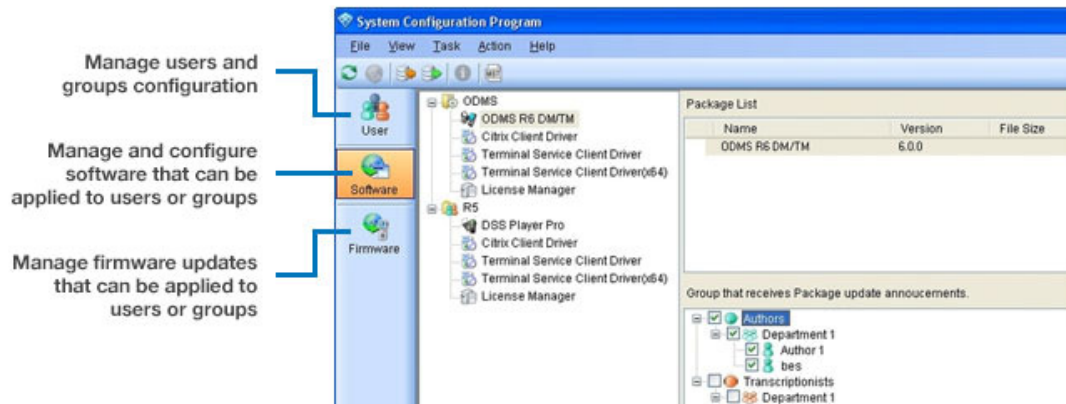

#### **Learn More About ODMS Workgroup Mode**

Olympus Dictation Management Systems (ODMS) Workgroup Mode is a powerful tool that allows for streamlined, centralized management of multiple Olympus Pro Dictation devices and software solutions. It is designed for medium and large organizations, and creates significant benefits across the enterprise.

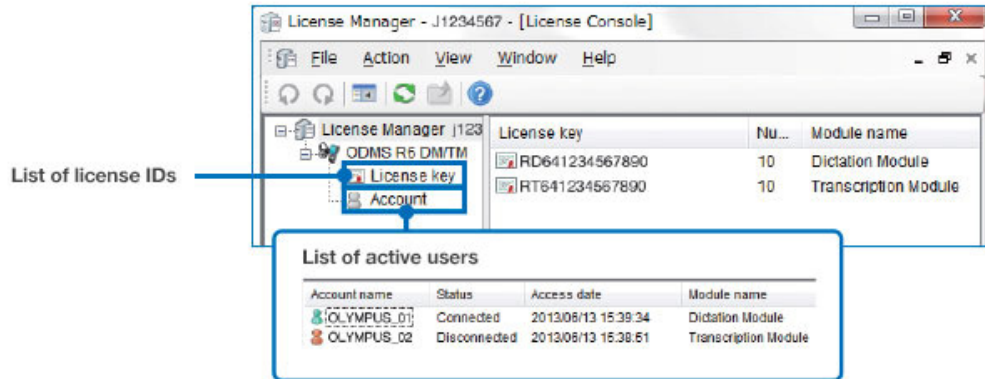

#### **Easier Management & Deployment**

- Custom installer files can be created to streamline the deployment process.
- Almost no client-side configuration is required; the software is ready once the user first launches it.
- Active Directory can be searched to add users into the system.
- All ODMS workflow and speech recognition settings can be centrally configured.
- Device settings can be customized remotely.
- Group profiles can be managed in larger numbers – allowing for faster, easier configuration.
- User profiles are accessible from any location on the company network, meaning users have a true “roaming” profile.
- Software and firmware updates can be downloaded and deployed to specific groups or users.
- Licenses are centrally managed, eliminating the need to input license numbers individually on each PC.

## System Configuration Program

## License Manager

## Increased Security

- Device and software settings can be locked centrally.
- File encryption can be configured by the IT administrator.
- Administration programs can be locked with a username and password.
- Virtual environments such as Citrix & Windows Terminal Services are supported.
- Repository service restricts access to the repository for security enhancement.

ODMS administration kit (AS-56) is required for Workgroup installation.
