Cloud-based dictation is an antidote to burnout. It helps doctors feel better about documentation, more satisfied and freer to practice as they see fit.

Doctors that use clinical speech recognition are 23% happier. They feel more confident about technology and have a better experience. They move freely, spend more time with patients and can go home on time.

Doctors already use mobile phones for everyday tasks and are looking to make clinical documentation more portable too.

- 12,138 steps are taken by the average healthcare professional per day, 2.3 times more than the typical American.
- 80% of doctors use a personal mobile device to communicate patient data.
- 88% of CIOs say portability is a key priority.

When doctors use cloud-based dictation, documentation becomes portable and astoundingly fast.

- 35% of doctors using the cloud choose to dictate on a mobile device.
- 3X faster than typing on a computer, dictation averages 150 words per minute.
- 2.5 hours saved for every hour dictated.

Doctors on the move need tech that keeps up.

Doctors are frustrated with time spent on clinical documentation and how it cuts into patient care – 88% report being moderately to severely stressed.

Overwhelmed by documentation

- 43% of a doctor’s workday is spent on data entry.
- 4,000 clicks for an average day of documentation.
- 7.2 million words documented by a single doctor in just one year.

Freedom comes at last

Cloud-based dictation is an antidote to burnout. It helps doctors feel better about documentation, more satisfied and freer to practice as they see fit.

Doctors already use mobile phones for everyday tasks and are looking to make clinical documentation more portable too.

- 43% of doctors using the cloud choose to dictate on a mobile device.
- 3X faster than typing on a computer, dictation averages 150 words per minute.
- 2.5 hours saved for every hour dictated.

Say hello to cloud-based speech
